Maximum Target power for KC00000A3-00

<u>TX Power Setting</u>

- Each product is programmed with the pre-defined RF parameters
- Each product RF power level is measured to ensure the power level not exceeding the target power level, in a fully calibrated setup.
- The user has no possibility to change these settings later on

Please find below the **Maximum** Transmit Power for production units:

Band / Frequency (GHz)	IEEE 802.11 Average Power (**Power unit: dBm**)		
	802.11b	802.11g	802.11n_HT20
WLAN 2.4G	8.25	8.25	8.25

The maximum output power, after for manufacturing tolerances, in production units will not exceed the value listed in the table above. Production units are all within (± 1.5 dB) of this value.
